Chem Lab C - Rickards Chemistry Laboratory - Rickards Invitational Div. C - 12-05-2020

Welcome to Rickards Chemistry Lab!

Below is a quick breakdown of the test you're about to take. This is a challenging exam and there is no penalty for guessing, so try not to get stuck on any one question. Best of luck!

Section Topic	Question Type	Question Count (75 Total)	Points Possible (200 Total)
Acids and Bases	Multiple Choice	15	15
Aqueous Solutions	Multiple Choice	15	15
Acids and Bases	Short Answer	5	25
Aqueous Solutions	Short Answer	5	25
Reactions	Short Answer	5	25
Trivia	Short Answer	10	20
Mystery Acid	Free Response	10	35
Solubility Puzzle	Free Response	8	30
Survey Questions	Multiple Choice	2	10

Acids and B	ases - Multiple Choice
1. (1.00 pts)	How many acidic protons does H ₃ PO ₂ have?
 ○ A) 0 ○ B) 1 ○ C) 2 ○ D) 3 ○ E) fOuR ○ F) fiVe 	
2. (1.00 pts)	79.17 mL of 3.909 M HCl is mixed with 82.40 mL of 3.505 M NaOH. What is the pH of the resulting solution?
 A) 13.8722 B) -0.2822 C) 6.7950 D) 6.8722 E) 0.1278 	

\bigcirc A) $\mathrm{H_2O};\mathrm{H_2O}$
\bigcirc B) $\mathrm{H_2O};\mathrm{H_3O^+}$
\bigcirc C) $\mathrm{H_2O};[\mathrm{B}(\mathrm{OH})_4]^-$
\bigcirc D) B(OH) ₃ ; H ₂ O
\bigcirc E) B(OH) ₃ ; H ₃ O ⁺
\bigcirc F) $\mathrm{B}(\mathrm{OH})_3; [\mathrm{B}(\mathrm{OH})_4]^-$
4. (1.00 pts) Select all of the following choices that are conjugate acid-base pairs.
(Mark ALL correct answers) \Box A) $\mathrm{H_2SO_4}; \mathrm{S}^{6+}$
\square B) HCOOH; COOH $^-$
\square C) $\mathrm{HBF}_4;\mathrm{F}^-$
\square D) HF; F $^-$
\square E) $\mathrm{H_3O^+};\mathrm{H_2O}$
\square F) $\mathrm{H_2CrO_4}$; $\mathrm{HCrO_4}^-$
5. (1.00 pts) Which of the following is not true of the autoionization of water?
O A) It is endothermic
O B) Its rate is limited by the speed of molecular diffusion
O C) It causes pure water to be acidic at high temperatures
\bigcirc D) Its equilibrium constant, K_w , equals $[\mathrm{H}_3\mathrm{O}^+][\mathrm{OH}^-]$
E) It is thermodynamically unfavorable at room temperature
6. (1.00 pts) Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true.
Consider a solution, Solution A, with $pH=1.00$ and another solution, Solution B, with $pH=2.50$. Given that both solutions are at room temperature, select all of the following statements that are
Consider a solution, Solution A, with $pH = 1.00$ and another solution, Solution B, with $pH = 2.50$. Given that both solutions are at room temperature, select all of the following statements that are true. (Mark ALL correct answers)
Consider a solution, Solution A, with $pH=1.00$ and another solution, Solution B, with $pH=2.50$. Given that both solutions are at room temperature, select all of the following statements that are true.
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true.
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true. (Mark ALL correct answers) A) $\frac{ \mathbf{H}^+ _A}{ \mathbf{H}^+ _B} = 10^{1.50}$ B) $\frac{ \mathbf{OH}^- _A}{ \mathbf{OH}^- _B} = 10^{-1.50}$ C) $[\mathbf{H}^+]_A = 10^{-1.00}$
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true. (Mark ALL correct answers) A) $\frac{ H^+ _A}{ H^+ _B} = 10^{1.50}$ B) $\frac{ OH^- _A}{ OH^- _B} = 10^{-1.50}$ C) $[H^+]_B = 10^{-1.00}$ D) $[H^+]_B = 10^{-2.50}$
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true.
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true.
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true. (Mark ALL correct answers) A) $\frac{\ H^+\ _A}{\ H^+\ _B} = 10^{1.50}$ B) $\frac{[OH^-]_A}{[OH^-]_B} = 10^{-1.50}$ C) $[H^+]_A = 10^{-1.00}$ D) $[H^+]_B = 10^{-2.50}$ E) $pOH_A < pOH_B$ F) None of the above are true
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true. (Mark ALL correct answers) A)
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true. (Mark ALL correct answers) A) $\frac{ H^+ _{A}}{ H^- _{A}} = 10^{1.50}$ B) $\frac{ OH^- _{A}}{ OH^- _{B}} = 10^{-1.50}$ C) $[H^+]_{B} = 10^{-1.00}$ D) $[H^+]_{B} = 10^{-2.50}$ E) $pOH_{A} < pOH_{B}$ F) None of the above are true 7. (1.00 pts) Given that the pK_{b} for ammonia is 1.8×10^{-5} , calculate the pH of a 0.57 M solution of ammonium chloride?
Consider a solution, Solution A, with pH = 1.00 and another solution, Solution B, with pH = 2.50. Given that both solutions are at room temperature, select all of the following statements that are true. $ \begin{array}{c} \text{(Mark ALL correct answers)} \\ \text{(A)} \frac{ H^{+} _{b}}{ H^{+} _{b}} = 10^{1.50} \\ \text{(B)} \frac{ OH^{-} _{b}}{ H^{+} _{b}} = 10^{-1.50} \\ \text{(C)} [H^{+}]_{A} = 10^{-1.00} \\ \text{(D)} [H^{+}]_{B} = 10^{-2.50} \\ \text{(E)} pOH_{A} < pOH_{B} \\ \text{(F)} None of the above are true} $ 7. (1.00 pts) Given that the pK _b for ammonia is 1.8×10^{-5} , calculate the pH of a 0.57 M solution of ammonium chloride?

○ E) 8.96
O F) Cannot be determined from the given information
8. (1.00 pts) Which of the following is not a major species present in a 1×10^{-14} M solution of KClO ₄ ?
\bigcirc A) K^+
○ B) ClO ₄
○ c) Cl ⁻
○ D) HO⁻
© E) H ⁺
○ F) All of the above are major species
9. (1.00 pts) Which of the following compounds is not amphoteric?
○ A) LiAlH ₄
○ B) H ₂ O
○ C) HCO ₃ ²
\bigcirc D) Al(OH) $_3$
○ E) All of the above are amphoteric
10. (1.00 pts) Given that the pK_a of KHP is 5.4, which of the following indicators would be most appropriate in a titration of KHP with NaOH?
\bigcirc A) Methyl red, pK _a = 4.95
\bigcirc B) Phenol red, pK _a = 7.9
\bigcirc C) Phenolpthalein, pK _a = 9.4
O Phenolpthalein, $pK_a = 9.4$ O D) Alizarin Yellow, $pK_a = 11.2$
\bigcirc C) Phenolpthalein, pK _a = 9.4
C) Phenolpthalein, $pK_a = 9.4$ D) Alizarin Yellow, $pK_a = 11.2$ E) Cannot be determined from the given information
O Phenolpthalein, $pK_a = 9.4$ O D) Alizarin Yellow, $pK_a = 11.2$
C) Phenolpthalein, $pK_a = 9.4$ D) Alizarin Yellow, $pK_a = 11.2$ E) Cannot be determined from the given information
 C) Phenolpthalein, pK_a = 9.4 D) Alizarin Yellow, pK_a = 11.2 E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water?
 C) Phenolpthalein, pK_a = 9.4 D) Alizarin Yellow, pK_a = 11.2 E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water? A) NaHF₂
 C) Phenolpthalein, pKa = 9.4 D) Alizarin Yellow, pKa = 11.2 E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water? A) NaHF₂ B) Ca(H₂PO₄)₂
 C) Phenolpthalein, pKa = 9.4 D) Alizarin Yellow, pKa = 11.2 E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water? A) NaHF2 B) Ca(H₂PO₄)₂ C) Na₂S
 C) Phenolpthalein, pK_a = 9.4 D) Alizarin Yellow, pK_a = 11.2 E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water? A) NaHF₂ B) Ca(H₂PO₄)₂ C) Na₂S D) (NH₄)HCO₃
 C) Phenolpthalein, pK_a = 9.4 D) Alizarin Yellow, pK_a = 11.2 E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water? A) NaHF₂ B) Ca(H₂PO₄)₂ C) Na₂S D) (NH₄)HCO₃
C) Phenolpthalein, $pK_a = 9.4$ D) Alizarin Yellow, $pK_a = 11.2$ E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water? A) NaHF₂ B) Ca(H₂PO₄)₂ C) Na₂S D) (NH₄)HCO₃ E) H₂SO₄
C) Phenolpthalein, $pK_{\alpha} = 9.4$ D) Alizarin Yellow, $pK_{\alpha} = 11.2$ E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water? A) NaHF ₂ B) Ca(H ₂ PO ₄) ₂ C) Na ₂ S D) (NH ₄)HCO ₃ E) H ₂ SO ₄ 12. (1.00 pts) Which of the following is the strongest base?
 C) Phenolphtalein, pK_a = 9.4 D) Alizarin Yellow, pK_a = 11.2 E) Cannot be determined from the given information 11. (1.00 pts) Which of the following salts forms the most basic solution in water? A) NaHF₂ B) Ca(H₂PO₄)₂ C) Na₂S D) (NH₄)HCO₃ E) H₂SO₄ 12. (1.00 pts) Which of the following is the strongest base? A) LiOH

○ E) All of these bases are the same strength
13. (1.00 pts) Which of the following is the strongest acid?
O A) HCl
O B) HClO
○ C) HClO ₂
O D) HClO ₃
○ E) HClO ₄
14. (1.00 pts) Which of the following is the strongest acid?
○ A) HF
O B) HCl
○ C) HBr
○ р) ні
15. (1.00 pts) Which of the following is the strongest acid?
\bigcirc A) HOOC-CH(NH ₃ ⁺)-(CH ₂) ₂ -COOH \bigcirc B) HOOC-CH(NH ₃ ⁺)-(CH ₂) ₂ -COOH
\bigcirc C) $^{-}$ OOC $-$ CH $(NH_3^+)-(CH_2)_2-$ COO $^{-}$ \bigcirc D) $^{-}$ OOC $-$ CH $(NH_2)-(CH_2)_2-$ COO $^{-}$
○ E) Cannot be determined from the given information
Aqueous Solutions - Multiple Choice
16. (1.00 pts) Which of the following ions is colorless in aqueous solution?
\bigcirc A) $\mathrm{CuCl_4}^{2-}$
\odot B) $\mathrm{Cr_2O_7}^{2-}$
O C) Ti ³⁺
\bigcirc D) Zn^{2+}
None of the above
17. (1.00 pts) Select all of the following ions that would form a green aqueous solution.
(Mark ALL correct answers) A) Ni ²⁺
□ B) Co ²⁺
\square C) Ag^+
\square D) Li^+
□ E) Ti ³⁺

$oxdot$ F) Fe^{2+}
18. (1.00 pts) Select all of the following that would give a yellow flame test.
(Mark ALL correct answers)
□ A) Cs
□ B) Li
□ C) K
\square D) Mg
□ E) Ca
□ F) Cu
19. (1.00 pts) Lead(II) nitrate solution is added to a saturated solution of sodium sulfate. Which of the following best describes what happens as a result?
O A) The amount of sodium sulfate in solution increases
O B) The amount of sodium sulfate in solution decreases
O C) The amount of sodium sulfate in solution stays the same
O D) The amount of sodium cation in solution increases
C E) The amount of sodium cation in solution decreases
O F) Cannot be determined from the given information
20. (1.00 pts) Select the choice that best describes the role of Na ⁺ in the following equation:
$\mathrm{Na_2S} + 2\mathrm{HCl} \longrightarrow \mathrm{H_2S} + 2\mathrm{NaCl}$
O D) Letward into
O B) Intermediate
O C) Conjugate base
O) Spectator ion
○ E) Oxidizer
21. (1.00 pts) Which of the following metals in aqueous solution is the highest on the activity series?
○ A) Ba
○ B) Al
O C) Cu
OD) Pt
○ E) Pb
22. (1.00 pts) What mass of lead nitrate should you weigh out when preparing 64.13 mL of 3.535 M solution of lead nitrate?
○ A) 150.2 g
○ B) 75.08 g
- - /, ~

○ C) 0.1502 g	
○ C) 0.1502 g ○ D) 0.07508 g	
○ E) Cannot be determined from the given information	
C L,	
23. (1.00 pts) 28.43 mL of a 9.813 M stock solution of NaOH is diluted to 100 mL. What is the concentration of Na ⁺ in the resulting solution?	
○ A) 9.813 M	
○ B) 0.009813 M	
○ C) 2.790 M	
○ D) 0.002790 M	
Cannot be determined from the given information	
24. (1.00 pts) Select all of the following that would be soluble in diethyl ether solvent.	
(Mark ALL correct answers) A) Pentane	
☐ B) Sodium sulfate	
C) Carbon tetrachloride	
□ D) Methanol	
☐ E) Hydrochloric acid	
25. (1.00 pts) As temperature increases, the solubility of solid solutes in a liquid solvent, while the solubility of gaseous solutes in liquid solvent	
25. (1.00 pts) As temperature increases, the solubility of solid solutes in a liquid solvent, while the solubility of gaseous solutes in liquid solvent O A) Usually increases; Always decreases	
O A) Usually increases; Always decreases	
A) Usually increases; Always decreasesB) Usually increases; Usually increases	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases 	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases 	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases 	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases 	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases F) Always increases; Usually increases 	
A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases F) Always increases; Usually increases 4 Increases 26. (1.00 pts) Solution A and Solution B are mixed to form an ideal mixture, Solution C. Select all of the following choices that are true of ideal solutions.	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases F) Always increases; Usually increases E) Always increases; Usually increases F) Always increases; Usually increases (Mark ALL correct answers) A) The Gibbs free energy of mixing is zero 	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases F) Always increases; Usually increases F) Always increases; Usually increases F) Always increases; Usually increases Mark ALL correct answers A) The Gibbs free energy of mixing is zero B) The entropy of mixing is zero 	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases F) Always increases; Usually increases F) Always increases; Usually increases (Mark ALL correct answers) A) The Gibbs free energy of mixing is zero B) The entropy of mixing is zero C) The enthalpy of mixing is zero C) The enthalpy of mixing is zero 	
 A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases F) Always increases; Usually increases E) Always increases; Usually increases F) Always increases; Usually increases (a) Dts) Solution A and Solution B are mixed to form an ideal mixture, Solution C. Select all of the following choices that are true of ideal solutions. (Mark ALL correct answers) A) The Gibbs free energy of mixing is zero B) The entropy of mixing is zero C) The enthalpy of mixing is zero D) The vapor pressure of Solution C obeys Raoult's and Henry's law 	
A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases F) Always increases; Usually increases F) Always increases; Usually increases 26. (1.00 pts) Solution A and Solution B are mixed to form an ideal mixture, Solution C. Select all of the following choices that are true of ideal solutions. (Mark ALL correct answers) A) The Gibbs free energy of mixing is zero B) The entropy of mixing is zero C) The enthalpy of mixing is zero D) The vapor pressure of Solution C obeys Raoult's and Henry's law E) The activity coefficients of all components of Solution C equal one	
A) Usually increases; Always decreases B) Usually increases; Usually increases C) Usually increases; Usually decreases D) Always increases; Always decreases E) Always increases; Always increases F) Always increases; Usually increases F) Always increases; Usually increases 26. (1.00 pts) Solution A and Solution B are mixed to form an ideal mixture, Solution C. Select all of the following choices that are true of ideal solutions. (Mark ALL correct answers) A) The Gibbs free energy of mixing is zero B) The entropy of mixing is zero C) The enthalpy of mixing is zero D) The vapor pressure of Solution C obeys Raoult's and Henry's law E) The activity coefficients of all components of Solution C equal one	

O В) NaOH
\bigcirc C) CaCl ₂
○ D) KClO ₃
○ E) NaCl
28. (1.00 pts) Given the following compounds and their corresponding K_{sp} values, identify the least soluble compound.
\bigcirc A) Al(OH) $_3,K_{sp}=1.8 imes 10^{-5}$
\bigcirc B) BaCO $_3, K_{sp} = 5.1 imes 10^{-9}$
\bigcirc C) $\mathrm{Cu_3(AsO_4)_2}, K_{sp} = 7.6 imes 10^{-36}$
$\bigcirc\;\; { m D)}\;\; { m Pb}({ m N}_3)_2, K_{sp} = 2.5 imes 10^{-9}$
Cannot be determined from the given information
29. (1.00 pts) A seawater solution is titrated with silver nitrate in the presence of potassium chromate to determine the chloride concentration in the solution. The endpoint of the titration is indicated by the formation of a red precipitate. Which of the following is the chemical formula of this precipitate?
 ○ A) AgNO₃ ○ B) K₂CrO₄ ○ C) KCl
○ D) Ag ₂ CrO ₄
© E) None of the above
30. (1.00 pts) Which of the following is least soluble in aqueous solution at 298 K?
30. (1.00 pts) Which of the following is least soluble in aqueous solution at 298 K? A) LiI
O A) Lii
○ A) LiI○ B) Na₂CO₃
 ○ A) LiI ○ B) Na₂CO₃ ○ C) NaOH
 ○ A) LiI ○ B) Na₂CO₃ ○ C) NaOH ○ D) Cs₂CO₃
 ○ A) LiI ○ B) Na₂CO₃ ○ C) NaOH ○ D) Cs₂CO₃
 ○ A) LiI ○ B) Na₂CO₃ ○ C) NaOH ○ D) Cs₂CO₃ ○ E) KNO₃
 A) LiI B) Na₂CO₃ C) NaOH D) Cs₂CO₃ E) KNO₃ Acids and Bases - Short Answer
 A) LiI B) Na₂CO₃ C) NaOH D) Cs₂CO₃ E) KNO₃ Acids and Bases - Short Answer
 A) LiI B) Na₂CO₃ C) NaOH D) Cs₂CO₃ E) KNO₃ Acids and Bases - Short Answer For questions 31-35, provide an explanation for the given observations relating to acids and bases.
 A) LiI B) Na₂CO₃ C) NaOH D) Cs₂CO₃ E) KNO₃ Acids and Bases - Short Answer For questions 31-35, provide an explanation for the given observations relating to acids and bases.
 A) LiI B) Na₂CO₃ C) NaOH D) Cs₂CO₃ E) KNO₃ Acids and Bases - Short Answer For questions 31-35, provide an explanation for the given observations relating to acids and bases.

33. (5.00 pts) The pK _a of CH ₃ COOH is 4.75, while the pK _a of CF ₃ COOH is 0.23.	
The p \mathbf{k}_a of OH_3COOM is 4.73, while the p \mathbf{k}_a of OH_3COOM is 0.23.	
34. (5.00 pts) The pK_a of H_2S is 7.00 while the pK_a of H_2O is 14.00.	
35. (5.00 pts) In liquid ammonia solvent, acetic acid and nitric acid have the same acidity.	
Aqueous Solutions - Short Answer	
For questions 36-40, provide an explanation for the given observations relating to aqueous solutions.	
36. (5.00 pts)	*.4
Lithium fluoride and lithium carbonate are somewhat insoluble at room temperature, despite the fact that lithium is an alkali metal. Additionally, the solubility of lithium fluoride increases we temperature, while the solubility of lithium carbonate decreases with temperature. (Hint: Consider the signs and relative magnitudes of the thermodynamic quantities that characterize the so	
each salt.)	ivation oj
Cuch sun.)	
27 (720 (4)) D. W. Q. (1) (1) (1) (1) (1) (1) (1) (1) (1) (1)	
37. (5.00 pts) Beryllium fluoride is highly soluble in water, despite being a covalent solid.	
38. (5.00 pts) MgO is more soluble in MgCl ₂ solution than in pure water.	
1. (A. 10 A. 10) A. 10 II OI C SOLUDIC III ALE OLZ SOLULIOII UIAII III PUIC WAICE.	

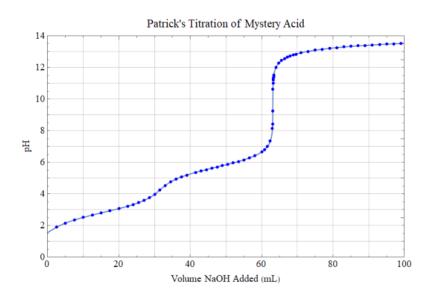

39. (5.00 pts) Equal amounts of	sodium chloride and potassium chloride in separate solutions both raise the boiling point of the solution by the same amount, despite the fact that they are different compounds.
40. (5.00 pts)	The solubility of sodium sulfate in aqueous solution increases up to 305 K, then decreases.
Reactions - S	
For questions 41-	5, provide balanced chemical equations for the given reactions.
	ay be omitted with no penalty. If no reaction occurs between the given reagents write "no reaction." Don't worry too much about formatting—as long as the equation you enter is iguous you'll get full points.
41. (5.00 pts)	The reaction of acetic acid with ammonia.
41. (5.00 pts)	The reaction of acetic acid with ammonia.
41. (5.00 pts)	The reaction of acetic acid with ammonia.
41. (5.00 pts)	The reaction of acetic acid with ammonia.
41. (5.00 pts)	The reaction of acetic acid with ammonia.
	The reaction of acetic acid with ammonia. Powdered Ag is added to concentrated HI solution.
42. (5.00 pts)	
42. (5.00 pts)	Powdered Ag is added to concentrated HI solution.
42. (5.00 pts)	Powdered Ag is added to concentrated HI solution.
42. (5.00 pts)	Powdered Ag is added to concentrated HI solution.
42. (5.00 pts)	Powdered Ag is added to concentrated HI solution.
42. (5.00 pts) 43. (5.00 pts)	Powdered Ag is added to concentrated HI solution.

45. (5.00 pts)	The addition of concentrated hydrochloric acid to a dilute cobalt(II) chloride solution.
Trivia - Shor	t Answer
46. (2.00 pts)	What mechanism models proton jumping in water and explains the exceptionally high mobility of protons relate to other cations?
47. (2.00 pts)	Which chemist introduced (the now obsolete but kind of useful sometimes maybe) hard-soft acid-base theory?
48. (2.00 pts)	What solution, a mixture of sulfuric acid, hydrogen peroxide and water, is a strongly oxidizing solution used to clean organic matter off substrates.
49. (2.00 pts)	What set of twenty buffers were selected by its namesake in the 1970s based on their applicability for use in biochemical research?
50. (2.00 pts)	Red cabbage juice can be used as a pH indicator due to the presence of what class of pigments, which are also found in other foods such as grapes and blueberries?

51. (2.00 pts) What is the name for the industrial process used to produce nitric acid?	
52. (2.00 pts) What acid is the primary component of gastric acid?	
53. (2.00 pts) Nessler's reagent is used to detect the presence of, and consists of tetraiodomercury mixed with a solution of	
54. (2.00 pts) Water has a melting point of around 273 K and ethanol has a melting point of around 159 K. However, a mixture of these two substances with 93% ethanol by weight has a melting point of around K. What is the term for this type of mixture?	ınd 15:
55. (2.00 pts) What base, also known as lye, is used in saponification reactions?	
Mystery Acid	
Questions 56-65 all refer to the same scenario.	
During an AP Chemistry lab, Daniel completely combusts 1.343 g of a certain acid at STP in the presence of oxygen, yielding 0.4650 mL of H ₂ O and 0.8675 L of CO ₂ .	
56. (3.00 pts) What is the empirical formula of this compound?	

Daniel's lab partner, Patrick, weighs out a 5.94900 g sample of the same acid. He plans to dissolve this sample in exactly 100 mL of water, then titrate it with NaOH.
57. (2.00 pts) What piece of laboratory glassware should Patrick use to dissolve and prepare his acid solution?
58. (3.00 pts) Patrick finds a bottle of stock NaOH solution labeled 1.75 M. However, instead of using this solution directly, he first standardizes the solution against KHP. Briefly explain the purpose of standardize and state one reason why KHP was used in this procedure.

Following standardization, Patrick determines the concentration of the stock NaOH solution to be 1.81172 M. He then uses it to titrate his acid sample, yielding the following titration curve:

59. (4.00 pts)

Patrick's titration curve seems to fluctuate significantly from \sim 25-40 mL. Is there an equivalence point in this range? If so, explain why there is no sharp change in pH. If not, propose an explanation fo the observed fluctuations.

60. (2.00 pts) What is the molar mass of this compound?
61. (1.00 pts) What is the molecular formula of this compound?
62. (2.00 pts) Write the balanced chemical equation for the complete combustion of this compound.
63. (2.00 pts) Identify the compound that Daniel and Patrick used in the lab by giving its name or structural formula below.
For questions 47-48, calculate the pH of the titration after the given volume of NaOH has been added.
You should use the exact numbers Patrick used in his titration, as well as the following exact pK_a values in your calculations: $pK_{a1} = 2.83$, $pK_{a2} = 5.69$. You will be scored based on how close you answer is to the exact theoretical value. As such, you may disregard significant figures in favor of accuracy with no penalty, if you'd like.
Note: Looking at Patrick's curve should get you a decent estimate, but it will not be particularly accurate as Patrick is not a great chemist. Additionally, in case you were considering doing so, you do not need to consider activity coefficients in your calculations as that is beyond the scope of this event.
64. (8.00 pts) 23.1704 mL
65. (8.00 pts) 63.5371 mL

Solubility Puzzle

Questions 66-73 refer to the following scenario.

Daniel and Patrick are back at it again! This time, Daniel prepares numbered vials, each containing stock aqueous solutions of the following compounds: $AgNO_3$, CaI_2 , HBr, KOH, K_2CO_3 and NH_4NO_3 (not necessarily in that order). Daniel then presents the vials to Patrick, challenging him to identify the solutions. Help Patrick identify which vial corresponds to which solution!

First, Patrick records the following observations about each solution:

- Solution 1: Colorless, neutral in pH (pH = 5), no odor.
- Solution 2: Colorless, neutral in pH (pH = 5), no odor.
- Solution 3: Colorless, strongly basic in pH (pH = 14), no odor.
- Solution 4: Colorless, strongly acidic in pH (pH = 0), slightly sour odor.
- Solution 5: Colorless, basic in pH (pH = 11), no odor.
- Solution 6: Colorless, neutral in pH (pH = 5), no odor.

66. (3.00 pts)	Explain why Patrick described Solutions 1, 2 and 6 as being neutral, despite the fact that the measured pH for each was 5.

67. (3.00 pts)

Upon closer inspection, the bottle in which Solution 4 is stored contains specks of a white precipitate. Propose a plausible identity for this precipitate and explain how it may have gotten there. (Hint: It may help to identify Solution 4 first.)

Next, Patrick reacts each solution pairwise with one another, yielding the following results:

	1	2	3	4	5	6
1	-	-	-	-	-	-
2	No reaction	reaction		-	-	-
3	Bubbling; Ammonia odor	Dark brown precipitate	-	-	-	-
4	No reaction	Off-white precipitate	Solution warms	-	-	-
5	Slight ammonia odor	Light yellow precipitate	No reaction	Intense fizzing; gas is odorless	-	-
6	No reaction	Yellow precipitate	Cloudy white precipitate	No reaction	White precipitate	-

68. (4.00 pts) Give the identity of Solution 1.

○ A) AgNO ₃
O B) CaI ₂
○ C) HBr
OD) KOH
\bigcirc E) K $_2\mathrm{CO}_3$
○ F) NH ₄ NO ₃
69. (4.00 pts) Give the identity of Solution 2.
69. (4.00 pts) Give the identity of Solution 2.
O A) AgNO ₃
\bigcirc B) CaI_2
O C) HBr
○ р) кон
\bigcirc E) K $_2\mathrm{CO}_3$
\odot F) $ m NH_4NO_3$
70. (4.00 pts) Give the identity of Solution 3.
\bigcirc A) AgNO $_3$
\bigcirc B) CaI_2
○ C) HBr
○ р) кон
\bigcirc E) K $_2\mathrm{CO}_3$
\bigcirc F) NH ₄ NO $_3$
71. (4.00 pts) Give the identity of Solution 4.
\bigcirc A) AgNO $_3$
\bigcirc B) CaI_2
○ C) HBr
O D) KOH
○ E) K₂CO₃
\bigcirc F) NH ₄ NO ₃
72. (4.00 pts) Give the identity of Solution 5.
\bigcirc A) AgNO $_3$
\bigcirc B) CaI $_2$ \bigcirc C) HBr
○ D) KOH
\bigcirc E) K ₂ CO ₃
○ F) NH ₄ NO ₃

73. (4.00 pts) Give the identity of Solution 6.	
O A) AgNO ₃	
\bigcirc B) CaI_2	
○ C) HBr	
○ р) кон	
○ E) K ₂ CO ₃	
\bigcirc F) NH ₄ NO ₃	
Survey Questions	
For questions 74-75, answer these two brief questions about your experience taking this exam. (You'll get points reg	gardless of what you answer, as long as you pick something.)
74. (5.00 pts) How would you and your partner characterize the difficulty of this exam?	
A) Greatest imaginable level of challenging	
B) Extremely challenging	
O C) Quite a bit challenging	
OD) Moderately challenging	
○ E) Slightly challenging	
O F) Not at all challenging	
75. (5.00 pts) As a result of our participation in this exam, my partner and I are motivated to study	chemistry, compared to before taking this exam.
O A) Far more	
O B) Somewhat more	
O C) Equally as	
O D) Somewhat less	
○ E) Far less	
END OF EXAM	
Great job getting here and good luck with your other events today!
