

In a population of lar gibbons, dark hair (H) is fully dominant to light hair (h). Does the physical presence of dark hair in a gibbon offspring refer to their genotype or to their phenotype

| \bigcirc | A) | Genotype |
|------------|--------|----------|
| \sim | \sim | Ochotype |

O B) Phenotype

2. (1.00 pts)

In a population of lar gibbons, dark hair (H) is fully dominant to light hair (h). If two light-haired gibbons mated, what is the normal probability that their offspring will have dark hair, barring chance mutation?

- O A) 100%
- B) _{75%}
- O C) 66.67%
- O D) 50%
- E) 25%
- O F) 0%

3. (1.00 pts)

In a population of lar gibbons, dark hair (H) is fully dominant to light hair (h). If two heterozygous dominant lar gibbons produced offspring, what percentage of the offspring would likely have light hair?

- O A) 100%
- O B) 75%
- O C) 66.67%
- O D) 50%
- O E) 25%
- O F) 0%

| 4 | 11 | ሰበ | pts |
|----|----|-----|-----|
| 4. | u | .uu | มเอ |

In a population of lar gibbons, dark hair (H) is fully dominant to light hair (h). If two heterozygous dominant lar gibbons produced offspring, what percentage of the offspring would likely have dark hair?

- O A) 100%
- O B) 75%
- O C) 66.67%
- O D) 50%
- E) 25%
- O F) 0%

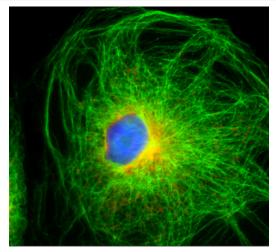

5. (2.00 pts)

In a population of lar gibbons, dark hair (H) is fully dominant to light hair (h). If two heterozygous dominant lar gibbons produced 250 offspring, what genotype would likely have the highest incidence of occurrence?

6. (5.00 pts) F₀ Generation F₁ Generation F₂ Generation Mother H Mother H Father Father Father

In a population of lar gibbons, dark hair (H) is fully dominant to light hair (h). If all of the offspring in the F_2 generation have dark hair, what is the likely genotype of the mother in the F_2 generation?

7. (1.00 pts)

What stage of cell division is depicted in the above image?

| (Mark ALL correct answers) |
|---|
| A) Interphase |
| B) Prophase |
| C) Metaphase |
| D) Anaphase |
| □ E) Telophase |
| F) Cytokinesis |
| |
| 8. (1.00 pts) Chromosomes Mitotic Spindle Spindle Pole Aster |
| In the image above, what stage of cell division is depicted? |

| (Mark ALL correct answers) A) Interphase B) Prophase C) Metaphase D) Anaphase E) Telophase F) Cytokinesis |

The above graphic illustrates several possible outcomes after both strands of DNA are broken during a crossover. After the breakage, one strand of DNA may attempt to repair itself by forming a D-loop and using the homologous chromosome as a template. If this strand successfully replicates the damaged region, it will dissociate from the homologous chromosome and anneal back to its original strand. This process is known as synthesis-dependent strand annealing (SDSA).

What is likely to occur in the Double Holliday junction pathway?

| 11. (1.00 pts) During which phase of a cell's lifecycle is DNA synthesized? |
|---|
| ····(····· p···)·····g ········· p·········-, ·······, ····· |

| |
| 17. (1.00 pts) In humans, dichromatic vision is an x-linked recessive trait. Which of the following statements are true? |
| (Mark ALL correct answers) |
| ☐ A) Males are more likely to express this trait |
| B) Females are more likely to express this trait |
| C) Males and females are equally likely to express this trait |
| D) Neither males nor females will express this trait |
| |
| 18. (1.00 pts) In humans, Fragile X syndrome is an x-linked dominant trait. Please select all true statements below. |
| |
| (Mark ALL correct answers) |
| A) Males are more likely to express this trait |
| B) Females are more likely to express this trait |
| C) Males and females are equally likely to express this trait |
| D) Neither males nor females will express this trait |
| |
| 19. (2.00 pts) Janet carries an x-linked recessive trait. Janet and Jim have 3 children who do not display the trait. If Janet and Jim have another child, what is the probability that this child will display the trait? |
| (Mark ALL correct answers) |
| □ A) 0% |
| □ B) 25% |
| □ C) 50% |

| □ D) 75%□ E) 100% | |
|--|--|
| | |
| 20. (2.00 pts) | Using the information in the previous question, what possible genotype(s) might Janet and Jim's child be, given that this child displays the x-linked recessive trait. |
| (Mark ALL correct | t answers) |
| □ B) XY | |
| □ c) YY | |
| □ D) XXY | |
| | |
| | orid cross between heterozygous goat parents with the genotypes WwHh and WwHh (W = wooly coat, w = smooth coat; H = horned, h = no horns). What is the a percentage) that an goat in the F1 generation will have a smooth coat with horns? Assume Mendelian inheritance. |
| | |
| | |
| 22. (1.00 pts) | Drewbie has type A- blood. His sister, Maggie, has B+ blood. His daughter, Fiona, has type O- blood. Ignoring the Rh factor, what is Drewbie's blood genotype? |
| | |
| | |
| 23. (1.00 pts) | Drewbie has type A- blood. His sister, Maggie, has B+ blood. His daughter, Fiona, has type O- blood. Ignoring the Rh factor, what is the blood genotype of Maggie? |
| | |
| | |
| 24. (1.00 pts) | Drewbie has type A- blood. His sister, Maggie, has B+ blood. His daughter, Fiona, has type O- blood. Ignoring the Rh factor, what is the blood genotype of Fiona |
| | |
| | |
| 25. (2.00 pts) | Drewbie has type A- blood. His sister, Maggie, has B+ blood. His daughter, Fiona, has type O- blood. What pattern of inheritance does this trait follow? |
| | |
| 26. (1.00 pts) | Drewbie has type A- blood. His sister, Maggie, has B+ blood. His daughter, Fiona, has type O- blood. Could Drewbie's mother carry the Rh(D) antigen? |
| | |
| | |

| A sequence of RNA is translated into a string of amino acids. After time, it is noted that some of the side chain residues are attracted to each other, and the protein begins folding inward on itself to lump these residues together on the inside of the protein. Why does this occur? |
|--|
| |
| |
| 28. (1.00 pts) An organism that has two identical alleles for a trait is: |
| ○ A) heterozygous |
| O B) codominant |
| O C) incompletely dominant |
| O D) homozygous |
| 29. (1.00 pts) What does the notation Aa mean to geneticists? |
| O A) 2 dominant alleles are present |
| O B) 2 recessive alleles are present |
| O C) An organism expresses the dominant trait but carries (and suppresses) the recessive trait |
| O D) At least 2 dominant allele |
| 30. (1.00 pts) Which of these is controlled by a gene with multiple alleles? |
| (Mark ALL correct answers) A) Hair color |
| □ B) Eye color |
| □ C) Hairline skew |
| □ D) Dimples |
| ☐ E) Blood type |
| 24 (4.00 pts). Constitutionardors are equated by: |
| 31. (1.00 pts) Genetic disorders are caused by: |
| O A) mutations |
| O B) recessive alleles |
| C) sickle-shaped cellsD) protein misfolding |
| C by potentialisting |
| 32. (1.00 pts) In genetics, the carrier of a trait is a person who has: |
| (Mark ALL correct answers) |
| A) Two dominant alleles |
| B) Two recessive and one deminant allele |
| One recessive and one dominant allele D) More than two alleles |
| |

| 33. (1.00 pts) Which direction is DNA read during replication? |
|---|
| O A) 3' to 5' |
| O B) 5' to 3' |
| ○ C) Simultaneously 3' to 5' and 5' to 3' |
| This is a trick question; DNA is unzipped by DNA Helicase and broken down into translatable adirectional chunks |
| |
| 34. (1.00 pts) What is the name of the fragments generated during replication of the lagging strand? |
| |
| O A) Apoptotic fragments |
| O B) Comet fragments |
| O C) TUNEL fragments |
| O D) Okazaki fragments |
| ○ E) Johnson fragments |
| |
| 35. (1.00 pts) Which of the following are organic molecules? |
| (Mark ALL correct answers) A) Nucleotides |
| □ B) Nucleosides |
| □ C) Nucleobases |
| □ D) Amino acids |
| □ E) RNA |
| □ F) Chromosomes |
| , |
| 90 (0.00 mts) What day of DOD have as at 70.00 |
| 36. (2.00 pts) What step of PCR happens at 72 C? |
| |
| |
| 37. (1.00 pts) What is the name of the extrachromosomal ring of DNA found in bacteria? |
| |
| |
| 38. (3.00 pts) What are the three-letter codes for each of the three stop codons? |
| |
| |
| |
| |
| |

39. (14.00 pts)

What amino acid sequence is produced by the following template-strand DNA sequence? (Please use 1-letter amino acid abbreviations in your answer. Example: Tryptophan is written as W.)

| 3' CAGGGGGGGGGCCTGATGGT 5' |
|--|
| |
| |
| |
| |
| 40. (3.00 pts) Given the mRNA fragment AUG-AAA-GGC-UCA, what sequence of amino acids is created? |
| |
| |
| |
| |
| 41. (2.00 pts) If a strand of DNA was placed equidistantly between two similar-magnitude but oppositely charged point charges, would it experience attraction? |
| O A) Yes, toward the negative charge |
| O B) Yes, toward the positive charge |
| C) Yes, toward both charges |
| D) No, it would be repelled by both charges No, it is a posterily charged company of |
| ○ E) No, it is a neutrally-charged compound |
| 42. (1.00 pts) What type of bond is formed between two sequential amino acids? |
| 42. (1.00 pts) What type of bond is formed between two sequential anniho acids? |
| O A) Glycoside bond |
| O B) Phosphodiester bond |
| C) Hydrogen bond |
| On Provide bond |
| ○ E) lonic bond |
| |
| 43. (4.00 pts) How are multifactorial traits and polygenic traits different? |
| |
| |
| |
| |
| 44. (2.00 pts) What are homologous chromosomes? |
| |
| |
| |
| |
| 45. (10.00 pts) How do mRNA vaccines, such as Moderna's SARS-CoV-2 vaccine, work? |
| |

| 46. (1.00 pts) | Where is mRNA translated? |
|----------------|---|
| | |
| 47. (3.00 pts) | Describe the structure of a chromatosome |
| | |
| | |
| 48. (1.00 pts) | On a pedigree, how would you indicate that an individual is deceased? |
| O A) A slash | mark |

For Questions 49-54, please refer to the following diagram.

○ B) Shading○ C) X

O D) Erase them

Please identify the correct term for each missing place on the diagram.

Word Bank: Aminoacyl binding site, peptidyl binding site, mRNA, 5', 3', tRNA, codon, anticodon, rRNA, exit site, residue

| 49. (1.00 pts) | Please identify the term in blank 49. |
|----------------|---------------------------------------|
| | |

50. (1.00 pts) Please identify the term in blank 50.

| |
| |
| 54. (1.00 pts) Please identify the term in blank 54. |
| |
| |
| 55. (2.00 pts) <i>P. tapanuliensis</i> has 48 chromosomes. How many chromatids would they have in prophase 1? |
| |
| |
| 56. (2.00 pts) <i>P. tapanuliensis</i> has 48 chromosomes. How many chromatids would they have at the end of meiosis II? |
| |
| |
| 57. (2.00 pts) Suppose the hypothetical protein GI1m interferes with another protein's ability to bind to a ligand. One would conclude that GI1m is a(n) |
| (Mark ALL correct answers) A) operon |
| ☐ B) transcription repressor |
| C) antibody |
| D) cofactor/coenzyme |
| |
| E) competitive inhibitor |
| |
| 58. (5.00 pts) Why is meiosis necessary? |
| |
| |
| |
| |

| 59. (1.00 pts) What is the primary role of an intron? |
|--|
| O A) They are translated by RNA polymerase in the ribosome |
| O B) They regulate gene expression |
| O C) They unzip DNA allowing for transcription |
| They protect DNA complexes from mutation due to photochemical radiation |
| |
| For questions 60-65, please refer to the following pedigree which tracks the presence of palm hair in ring-tailed lemurs. In these questions, H will refer to the dominant allele and h w refer to the recessive allele. |
| Affected female Normal female Affected male Normal male I |
| |
| |
| $\begin{array}{cccccccccccccccccccccccccccccccccccc$ |
| 60. (2.00 pts) What modality of inheritance does this trait follow? |
| O A) Autosomal dominant |
| O B) Autosomal recessive |
| C) X-linked dominant |
| OD) X-linked recessive |
| O E) Mitochondrial |
| |
| 61. (1.00 pts) What is the genotype of individual I-2? |
| |
| |

(2.00 pts) Important features of the chymotrypsin catalytic process include: (Mark ALL correct answers) A) tetrahedral intermediates B) oxyanion holes |

| 82. (2.00 pts) How do you elute His-tagged proteins from a nickel column? |
|--|
| ○ A) increase pH |
| O B) increase [imidazole] |
| O C) increase [NaCl] |
| O D) decrease [NaCl] |
| |
| 83. (2.00 pts) The Y-O2 binding curve of myoglobin is, while that of hemoglobin is |
| ○ A) exponential; sigmoidal |
| O B) sigmoidal; hyperbolic |
| O C) linear; sigmoidal |
| Ophyperbolic; sigmoidal |
| |
| 84. (2.00 pts) Where does BPG bind to hemoglobin and what does it do? |
| O A) Binds to central cavity; stabilizes T state |
| O B) Binds to central cavity; stabilizes R state |
| O C) Binds to amino terminus; stabilizes T state |
| O D) Binds to amino terminus; stabilizes R state |
| |
| 85. (2.00 pts) Where are you likely to find P residues? |
| O A) alpha helices |
| O B) beta sheets |
| O C) turns |
| O D) both sheets and helices |
| |
| 86. (2.00 pts) Sickle cell anemia arose from a |
| ○ A) Frame shift mutation |
| |
| O B) point mutation |
| B) point mutationC) conservative substitution |
| |
| C) conservative substitution |
| C) conservative substitution |
| C) conservative substitution D) none of these 87. (20.00 pts) A peptide isolated for sequencing consists of the following amino acids: Arg, Gly, Met, Phe, Trp, Tyr, and 3 Cys. The high C content suggests the possibility of disulfide bridges so |
